Description

A web application for users to login or register to look up on their predictions based on their Date of Birth.

Features

- Login and Signup
- Select the signs
- Get quote from month and day

Planning - User Stories

A quick look for users to see what predictions are set up for them.

Planning - Database

Database is created with all registered users to login and out, as well as to staying in session to see their quotes.

Technology Stack

- Language: C#
- Framework: Visual Studio 2019
- Template engine: ASP.Net Core MVC
- Database engine: Database Context in MVC

Demo

What I Learned

- MVC database without the need of SQL server or Oracle
- Creating text files to be read from the code.
- Creating the login and registration.

What's Next

- Users to “Like” a quote.
- Customize the style of the webpage.
- Admin and their features.
